Scandinavian weather conditions allowed us to gather extensive experience that can lead to the production process housing and customer satisfaction.

Our houses are well-thought-out solutions, yes to be able to feel as if in a small space in your own, comfortable apartment.

High-quality materials used in production combined with experienced employees production, our customers make it possible they had a **10 year warranty!**

illustrativ visualisering

The interior is made of materials natural. The walls and ceiling are the same furniture (bodies and fronts) made of birch wood, which is the material natural. Thanks to the application materials of the highest quality we can ensure the safety of our customers and boldly offers up to a 10-year warranty!

To meet our needs We offer our customers the possibility of implementation individual project!

The supporting skeleton of the house is the structure

steel, individually designed by our designers, thanks to that our homes achieve such a long life.

Thermal insulation of the house is made of they think of Scandinavian conditions, that is why the walls, floor and ceiling were left standing

insulated with open PUR foam cellular and triple joinery windows with warm frame. The height is

temosna, made from 100% natural processing (the process uses only high temperature and steam). Characteristic The special feature of the board is its reduced absorption water. Moreover, it is not subject to deformation tensions caused by changes air humidity.
